

Permanent Way Institution NSW

Technical Meeting and AGM

Thursday 12th August 2021 at 5.00pm
Teams Meeting (go to pwinsw.org.au for details)

Tahmoor Coking Coal is an underground coal mining operation situated in the Southern Highlands Region of NSW, located just south of the Tahmoor township and approximately 80km south west of Sydney. Tahmoor Coking Coal has been in operation since 1980, and since April 2018 have been owned and operated by SIMEC Mining, a member of the GFG Alliance.

The August technical meeting and AGM is proudly sponsored by SIMEC Mining. Kevin Golledge and Ross Barber will present on how mining subsidence is being effectively managed at Tahmoor under an active railway.

Managing mining subsidence on the Main Southern Railway

Tahmoor Coking Mine is an underground coal mining operation situated in the Southern Highlands Region of NSW that primarily produces hard coking coal using the longwall mining system.

Tahmoor Coal has been mining under the Main Southern Railway for over 15 years with a record of managing rail subsidence with *no delays* to rail traffic.

Kevin Golledge and Ross Barber will guide us through their successful strategies to prepare for and manage mining subsidence.

Their presentation will cover:

- The process for approval and the teams involved
- Planning for rail subsidence
- Pre-mining infrastructure preparation
- Monitoring and managing the infrastructure during the mining
- Restoration of damaged infrastructure post mining.
